1. LUPUS IS COSTLY

With serious organ involvement, and lack of diagnosis, the impact on the health care system is huge

57 % of lupus respondents have had to be hospitalized due to complications from their disease

2. UGLY `BONUS` PRIZES: In addition to inflammation, multi-organ involvement and potential organ failure, many conditions often accompany lupus: Raynauds syndrome, Sjogren`s syndrome, rheumatoid arthritis, fibromyalgia, as well as serious side effects from long-term strong medication
